Using the Product Update Timetable

If Butrans® 7.5 mcg/hr strength is not available in your HCP's ePrescribing system, follow these steps:

- ▶ Determine which EHR system is being used and then locate the EHR system name on timetable
 - ▶ Note: Surescripts is an intermediary and not the EHR or ePrescribing system
- ▶ If the EHR system is listed as “Automatic”, you can assume the update will occur within the designated timeframe
- ▶ If the EHR system needs a “Practice Triggered” update, someone affiliated with the practice will be responsible for manually processing the update
 - Updates might be triggered by the IT department, IT consultant, or someone within the practice
- ▶ Use manual or paper prescriptions until Butrans 7.5 mcg/hr strength product information is in the system
- ▶ If product information is not available or inaccurate after the expected date
 - Use the EHR *Issue Identification Form* that has been added to the prescriber profile screen in Phoenix.
 - The prescriber details are auto-filled based on the information available in the prescriber profile. Fill the rest of the form out with as much information as you can gather and “SUBMIT”.
 - The helpdesk will reply to your request via email.
- ▶ If the HCP's system is not listed on this timetable, use the EHR *Issue Identification Form* to send the EHR system name and the helpdesk will research the EHR and provide the timing
